Notice and terms of use

Neither the Society nor its officers, its servants or agents shall be responsible or liable in negligence or otherwise howsoever in respect of any inaccuracy or omission contained herein.

Without derogating from the generality of the foregoing neither the Society nor its officers, its servants or agents shall be liable for any indirect or consequential loss caused by or arising from any inaccuracy or omission herein.

DEFINITIONS

1 Total Loss For the purpose of Lloyd's Register Casualty Return the term 'Total Loss' refers to a merchant ship which, as a result of being a marine casualty, has ceased to exist, either by virtue of the fact that the ship is irrecoverable or has subsequently been broken up. Ships which have been declared constructive total losses but which are undergoing or have undergone repairs are not included. Ships of less than 100 gross tonnage are not included in the Return.

2 Casualty Categories are defined as follows:

Foundered Includes ships which sank as a result of heavy weather, springing of leaks, breaking in two, etc., but not as a consequence of categories listed below.

Missing After a reasonable period of time, no news having been received of a ship and its fate being therefore undetermined, the ship is posted as 'Missing' at the Corporation of Lloyd's and is included in the Missing category on the data base together with similar cases reported by other reliable sources.

Note: In peacetime, missing ships are considered as losses occasioned to ships by marine perils.

Fire/Explosion Includes ships lost as a result of fire and/or explosion where it is the first event reported.

Note: It therefore follows that casualties involving fires and/or explosions after collisions, stranding, etc., would be categorised under 'Collision', 'Stranding'.

Collision Includes ships lost as a result of striking or being struck by another ship, regardless of whether under way, anchored or moored. This category does not include striking underwater wrecks.

Contact Includes ships lost as a result of striking an external substance but *not* another ship or the sea bottom (see categories 'Collision' and 'Wrecked/Stranded'). This category includes striking drilling rigs/platforms, regardless of whether in fixed position or in tow.

Wrecked/Stranded Includes ships lost as a result of touching the sea bottom, sandbanks or seashore, etc., as well as entanglement on underwater wrecks.

Lost, etc.

(i) **War Loss/Damage during Hostilities.** This category also encompasses loss occasioned to ships by hostile acts.

(ii) **Hull/Machinery Damage** Includes ships lost as a result of hull/machinery damage or failure which is not attributable to any other category.

(iii) **Miscellaneous** Includes ships which have been lost which, for want of sufficient reasons, cannot be classified.

3 Date of Casualty The date of casualty is that on which the first reported event of the casualty occurred.

Summary of Total losses during 1985

The total tonnage lost during 1985 (1,651,210 gross tonnage) showed a decrease of 702,731 gross tonnage over the figure for 1984 (which was the highest ever recorded). The number of ships lost (307) was the lowest since 1965. Comparisons over a period of twelve years are shown at the end of Table 1.

The largest ship totally lost during the year was the Greek steam tanker FAIRSHIP L. (131,654 gross tonnage, built 1974).

Foundered The number of ships that foundered during 1985 (108) was twenty-three less than the previous year. Thirty-eight per cent of these were twenty years old or more. The tonnage lost in this category showed an increase of 29,298 to a figure of 242,234 gross tonnage, although the number of ships lost was the lowest since 1974.

The largest ship lost was the South Korean ore/oil carrier HOPE STAR (66,593 gross tonnage, built 1970) which broke in two and sank off Casablanca in heavy weather whilst on voyage from Port Hedland to Dunkirk with a cargo of iron ore. This ship accounts for 27% of the tonnage lost in this category during the year.

Missing Two ships were reported as missing during the year. Tonnage in this category totalled 28,570 gross tonnage, mostly accounted for by the Panamanian ore carrier ARCTIC CAREER (28,413 gross tonnage, built 1966). This ship was on voyage from Tubarao to Cigading with a cargo of 67,000 tons of iron ore when she reported to her agents that she had sustained heavy weather damage in the middle of the South Atlantic. Some debris and an oil slick were found 300 miles north-east of Tristan de Cunha, but there was no positive evidence that these items were from the missing vessel. Twenty-seven crew members were reported missing.

Fire/Explosion Gross tonnage totally lost in this category during 1985 was 276,126 a decrease of 88,603 gross tonnage over 1984. The numbers of losses in this category fell to forty-eight. This was the lowest number recorded since 1965 and the lowest gross tonnage since 1976.

The most notable incident in this category happened in May at the San Rogue oil terminal, Spain. An explosion and fire occurred whilst the Panamanian tanker PETRAGEN ONE (19,070 gross tonnage, built 1982) and the Spanish tanker CAMPONAVIA (4,222 gross tonnage, built 1973) were berthed next to each other on a floating jetty. Thirteen lives were lost on the Panamanian tanker which was unloading her cargo of naphtha and a further twelve on the Spanish tanker which was loading gasoline at the time of the incident.

The Liberian tanker SINODA (16,423 gross tonnage, built 1974) exploded whilst tank cleaning off Japan. She had just completed discharging a cargo of naphtha at Chiba. Seven people were killed on the Ecuadorian tanker PAOLA A (1,969 gross tonnage, built 1973) which sank after an explosion whilst under repair at Guayaquil. Alterations were being carried out to the cargo piping equipment when the explosion ripped through the empty vessel.

The largest ship lost in this category was the Liberian tanker ELEFThERIA M (38,275 gross tonnage, built 1965) which sustained fire damage to accommodation whilst discharging fuel oil at Porto Marghera.

Collision For the third consecutive year the numbers of losses in this category remained the same (35), however gross tonnage lost showed an increase of 23,491 over the 1984 figure. At least seven of the collisions occurred in bad visibility or fog.

The largest ship lost was the Greek tanker PATMOS (51,616 gross tonnage, built 1969) carrying a cargo of crude oil, which caught fire after a collision with the Spanish tanker CASTILLO DE MONTEARAGON (68,608 gross tonnage, built 1984) in the Straits of Messina.

Contact Ten ships were lost in this category during the year, amounting to 13,670 gross tonnage. The largest was the Panamanian general cargo ship SUN EEL No. 5 (3,449 gross tonnage, built 1966) which struck the quay and sank at Muroran after dragging anchors in heavy weather. Also lost in the same month was the South Korean general cargo ship SAM ICK (3,046 gross tonnage, built 1967) which struck an unidentified submerged object and sank in the South China Sea.

Wrecked/Stranded Total losses in this category showed a decrease both in the number of incidents and in tonnage lost. There were seventy-four ships of 257,429 gross tonnage in 1985 compared with sixty-nine ships of 360,648 gross tonnage in 1984.

The largest ship was the Greek bulk carrier STAMY (30,315 gross tonnage, built 1972) which stranded 12 miles north of Dunkirk whilst on voyage from New Orleans to Ghent loaded with 51,000 tons of corn. This ship was subsequently refloated and taken to Ghent for breaking up.

The oldest ship totally lost during 1985, was in this category. It was the Antigua and Barbuda general cargo ship DELORIS (243 gross tonnage, built 1935) which was wrecked off Antigua.

One notable loss in this category was the Panamanian bulk carrier ARIADNE (16,168 gross tonnage, built 1979) which was wrecked at Mogadiscio and broke in three after tow parted in heavy weather. Somali authorities evacuated the waterfront area fearing a catastrophe should the cargo of toxic chemicals come into contact with the sea.

Lost, etc. Forty-five per cent of all total losses during the year fell into this category, compared with fifty-five per cent in 1984. Whilst the percentage remains high this category shows a forty-three per cent reduction in tonnage compared with 1984. The continuation of hostilities between Iran-Iraq accounted for the loss of seven tankers, two container ships, one bulk carrier and a tug.

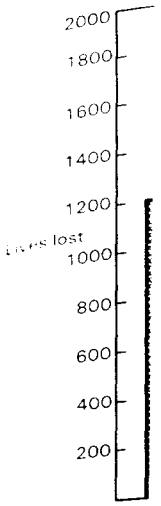

Four ships over 100,000 gross tonnage are included in the lost category, all of which were lost as a result of the conflict in the Gulf region. The largest ship lost was the Greek steam tanker FAIRSHIP L. (131,654 gross tonnage, built 1974) which was struck in the engine room by a missile whilst on voyage to Kharg Island.

Other notable losses in the hostilities section included the Panamanian general cargo ship ATTAVIROS (493 gross tonnage, built 1960) which was intercepted and sunk 100 miles off the Israeli coast reportedly carrying guerillas. Twenty lives were lost in this action. One crew member died when the British research ship RAINBOW WARRIOR (418 gross tonnage, built 1955) was sunk by a mine in Auckland Harbour. The Greenpeace environmental group flagship was due to lead a protest flotilla to the French nuclear test site at Mururoa Atoll.

Distribution The geographical distribution of total losses during the year is shown on pages 10 and 11.

Types The total number of 307 ships lost during 1985 included 19 oil tankers, gross tonnage 776,105 (47.0 per cent), 22 ore/bulk carriers, gross tonnage 405,038 (24.5 per cent) and 66 fishing craft. One hundred and fifty-five general cargo vessels were lost, accounting for 363,397 gross tonnage (22.0 per cent). (For an analysis of losses by type see Table 3).

Size Forty-six per cent of ships lost were under 500 gross tonnage. The number of ships lost with a gross tonnage of 10,000 and above was thirty-eight, of which four were over 100,000 gross tonnage.

Age Six per cent of all ships lost were less than five years old; nineteen per cent were twenty-five or more years of age. One ship was recorded as age unknown. The youngest vessel lost was the British general cargo ship GWYN (794 gross tonnage, built 1985) which sank four months after completion.

Lives Lost The number of persons reported killed or missing as a result of total losses are indicated below for the years 1981-1985. The figure for 1985 (619) shows an increase of ninety-four over last year's figure.

The greatest loss of life occurred when the Philippine ferry ASUNCION (141 gross tonnage, date of build unknown) foundered 15 miles S.W. of Calavite in heavy weather with the loss of one hundred and thirty-six lives. Forty lives were lost on the Indian passenger/general cargo ship CHIDAMBARAM (17,226 gross tonnage, built 1966) which was extensively damaged by fire in the accommodation 300 miles south east of Madras. The loss of the Panamanian diving support vessel HUICHOL II (455 gross tonnage, built 1966) claimed another thirty-three lives when she foundered in the Gulf of Campeche, one of Mexico's principal oil producing areas.

Nine ships sustained twenty or more human casualties during 1985. Seventy-one per cent of all lives lost were reported against ships in the foundered category compared with just over fifteen per cent who died as a result of fires and explosions. Thirty-two people were reported lost on the two ships in the missing category.

Registration Panama and Japan each sustained forty-six ship losses followed by Greece with twenty. Greece suffered the highest tonnage loss with 342,828 followed by Panama with 295,895. Other registrations sustaining losses over 100,000 gross tonnage included Cyprus (177,804), Turkey (118,211) and Liberia (107,251).

Total losses to the following countries whose merchant fleets totalled more than six million gross tonnage are shown below with comparative figures for 1984 shown in parentheses. Further comparisons can be obtained from Table 5.

Summary of ships Broken up, etc., reported during 1985

Tonnage reported broken up during 1985 increased by 4,478,373 to a gross tonnage figure of 22,229,335 and is the highest total ever recorded. The number of vessels involved (2,360) is 575 more than in 1984 and is also the highest number ever recorded. Comparisons over a period of twelve years are shown at the end of Table 1.

The largest ship broken up during the year was the Gibraltar flag steam tanker CORAG (205,960 gross tonnage, built 1976) which had been laid up in the West Indies since December, 1982. The 423,798 deadweight ULCC was renamed (formerly CORAGGIO, ITL flag) for her final voyage to Kaohsiung breakers.

The youngest ship broken up in 1985 was the Spanish general cargo ship LA MAGDELENA (3,780 gross tonnage, built 1980) which was broken up at Algeciras.

The oldest ship broken up during the year was the Panamanian general cargo ship TUXPANCLIFFE (3,587 gross tonnage, built 1896) which was broken up at Corpus Christi, Texas.

Countries sending most tonnage to the breakers during the year were as follows:

	Gross tonnage
Liberia	3,956,147
Greece	2,911,426
Panama	2,690,458
Netherlands	1,187,683
Japan	1,128,653
Cyprus	1,077,846

	Gross tonnage
Malta	823,556
Gibraltar	726,326
France	605,686
Italy	603,816
U.S.S.R.	455,162
Spain	450,075
United States of America	437,072

The Province of Taiwan maintained its position as the principal place of disposal taking over thirty-five per cent of all tonnage. This is nearly 2.5 per cent less than in 1984 despite taking an additional 1,134,664 gross tonnage. The People's Republic of China continued the expansion of its shipbreaking industry, almost doubling their share to 22.6 per cent, taking 5,018,768 gross tonnage. This represents an increase of nearly three million gross tonnage with one hundred and nineteen vessels more than in 1984. This appears to be mostly at the expense of Korea (South) whose percentage fell by half to 11.5 per cent. India emerged, more than doubling the number of vessels and tonnage to 135 ships and 1,303,404 gross tonnage. Spain still maintains its position as the leading European shipbreaking nation with 603,292 gross tonnage. Greece demolished sixty ships, twenty-four more than in 1984 although there was no significant increase in tonnage or percentage.

The U.S.S.R. and Japan demolished the highest number of ships with 494 and 487 respectively. Both nations break up mostly small domestic tonnage. Figures for the U.S.S.R. could be misleading owing to the late reporting of disposals from their fleet.

Principal places of Disposal

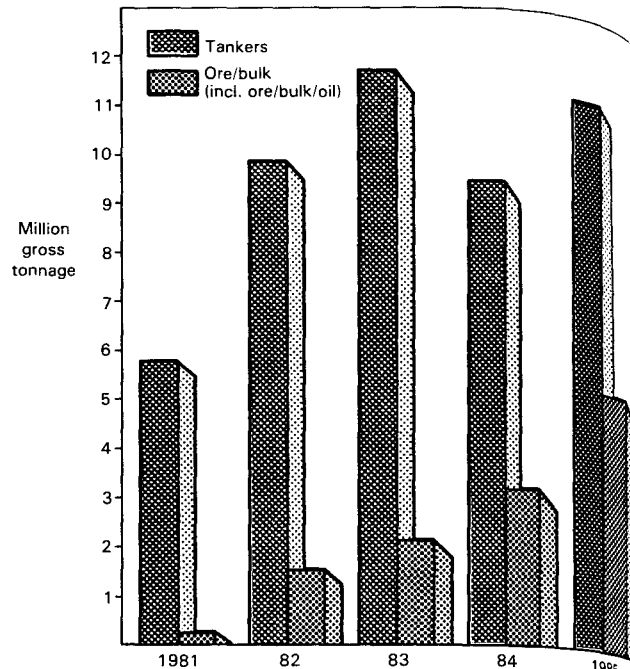

(showing gross tonnage broken-up)

Tanker tonnage disposed of (11,293,895 gross tonnage) amounted to 50.8 per cent of the total sold for demolition, compared with 53.4 per cent in 1984, although the figure was almost two million gross tonnage higher than the previous year. The average size of tanker broken up was 40,772 gross tonnage. Sixty-two ships of 100,000 gross tonnage and above were broken up during the year: all but two were steam tankers, the exceptions being the Netherlands motor tanker ALMA (124,234 gross

tonnage, built 1975) and the steam ore/oil carrier WORLD LADY (LIB flag, 113,405 gross tonnage, built 1972). Ore/bulk carriers disposed of amounted to 24.1 per cent of the total (5,351,963 gross tonnage). A comparison between tankers and bulk carriers broken up over a period of five years can be seen below.

Tankers and Bulk Carriers Broken up, etc., 1981-85

One thousand and forty-one general cargo ships were broken up, an increase of 94 compared with 1984. Sixty-nine per cent of these were twenty years old or more. Other types recording notable increases in numbers were fishing with 479 and tugs with 79, compared with 172 and 40 respectively.

Serious casualties

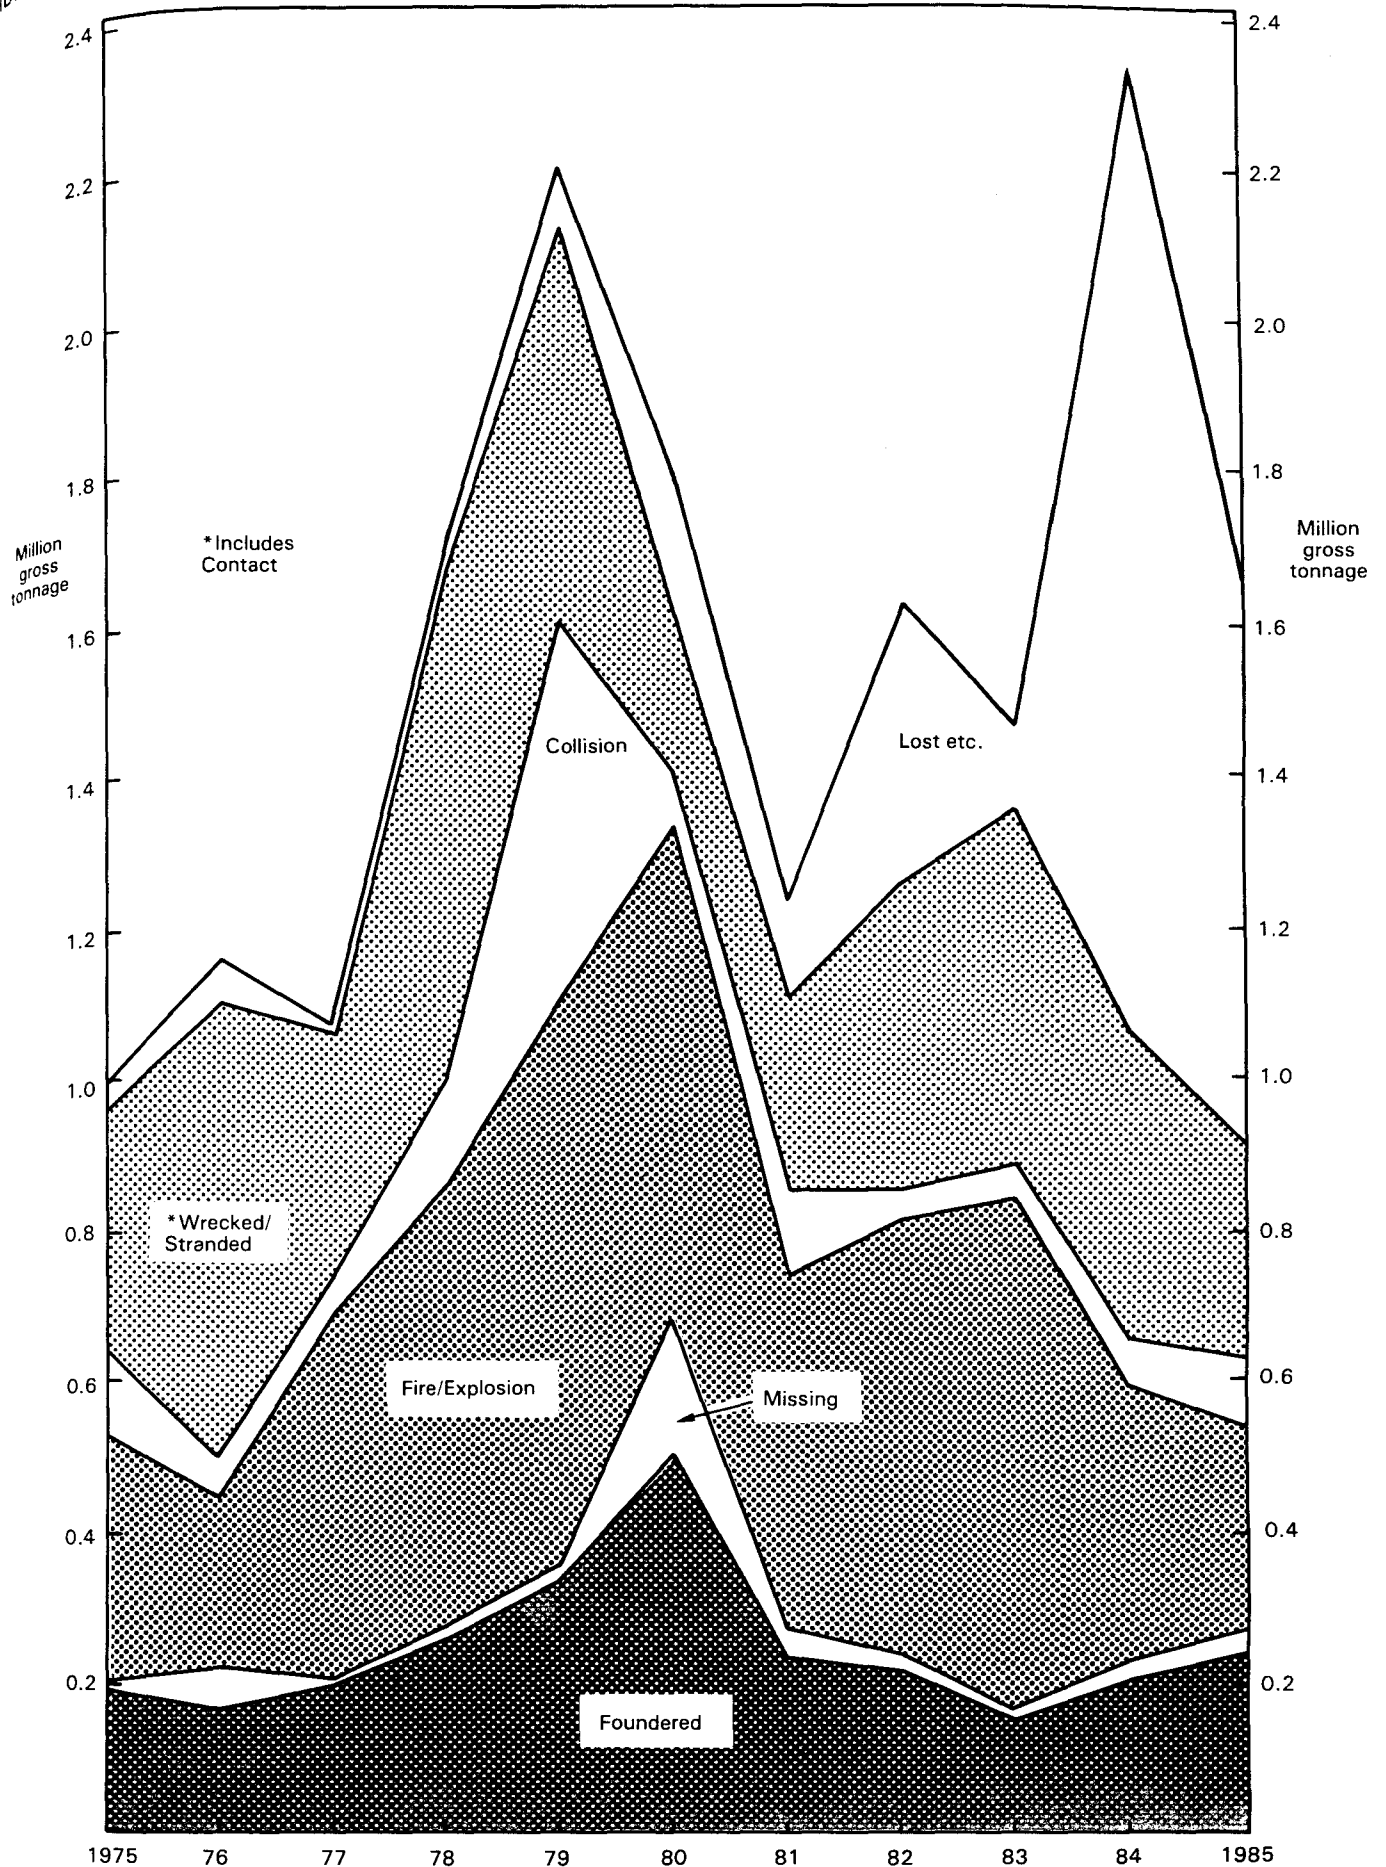

Owing to the prevailing market conditions and also the Iran-Iraq conflict, there is a growing number of ships seriously damaged, or, as in the case of the war, trapped and/or damaged, for which a decision regarding repair or disposal has been considerably delayed. A separate section dealing with these cases is included in this Return (see Part 3). They will, of course, appear in the relevant Casualty Return at the time of their eventual disposal.

Ships reported sold for Breaking up

There are an increasing number of ships which have been reported sold for breaking up, but where demolition did not commence during the period covered by this return. As an extra service we are providing an alphabetical list of these ships, together with the gross tonnage, in a separate section at the end of this return (see Part 4). They will, of course, appear in the relevant Casualty Return at the time of their eventual disposal.

Lloyd's Maritime Information Services Limited

Lloyd's Maritime Information Services Ltd., is a private limited Company owned jointly by Lloyd's Register of Shipping and Lloyd's of London Press Limited (the publishing and intelligence subsidiary of the Corporation of Lloyd's) and was formed in March 1986 to enable the maritime industry to access the vast amount of shipping information which is maintained by the parent companies. The main computer databases relate to the birth, life and death of propelled sea-going merchant ships and are as follows:

New Construction File

Provides comprehensive details of all known, propelled sea-going merchant ships of 100 gross tonnage and above, on order or under construction throughout the world and all ships to be classed with Lloyd's Register.

Register Book File

Contains comprehensive details of all known, propelled sea-going ships of 100 gross tonnage and above in the world and all ships presently classed with Lloyd's Register.

Shipping Movements File

Comprises over 35,000 merchant ships currently engaged in sea-going world trade with details of ship characteristics, current voyage and latest movement information.

Shipowner and Parent Company File

Records the names, addresses, telephone and telex numbers of all shipowners and managers held on the Register Book File, together with details of all ships owned or managed by each company. Also contains extensive information on parent companies and relationships to registered owners and managers.

Casualty File

Contains details of reported serious casualties (including total losses) to all known, propelled sea-going merchant ships of 100 gross tonnage and above, occurring since 1978 plus all reported incidents (serious and non-serious) to tanker types since 1976. Records of ships broken up not as a consequence of casualty are also included.

All of these files are linked through the use of the unique Lloyd's Register Identity Number to enable information from more than one file to be produced. Output from the files can be supplied in the form of computer readable magnetic tape, diskettes, computer printout or microfiche and individual extract programs are written to meet individual client requirements. Alternatively the following on-line systems are available:

- **SEADATA** is an on-line retrieval system available to subscribers at remote locations using terminals, micro computers and teletypes capable of a variety of emulation which are supported through protocol converters. Seadata provides access to all of the LMIS databases.
- **MARDATA** combines on-line retrieval from subsets of the LMIS databases together with a unique Charter Fixtures Library but also combines the strengths of powerful statistical and analytical software. Mardata is accessed worldwide via the GE Mark III satellite communications system.
- **VIEWDATA** is a teletext system offering information on Ship's Latest Position and British Isles Port Data.
- Shipping Economics Advisory Group (Seagroup) is also part of Lloyd's Maritime and provides a high level consultancy service to clients worldwide. Seagroup have considerable experience in assisting all sectors of the maritime industry in interpreting and adding value to information and in conducting studies into a wide range of activities.
